1. Problem statement

The menu bar has become cluttered and is becoming too large. The landing or front page is too long and you seem to scroll for ever. There are also three frames around many of the post on the front page, which I don't believe belong there and are distracting from the content. The picture in the photo gallery are unevenly spaced and arranged. There is also text throughout the site which I feel could be cleaned up and made to look better.

2. Proposed solution:

- a. Redesign and cleaning up of main menu. Make actual static pages to go along with menu items.
- b. Create a static front landing page.
- c. Move blog into the side- bar
- d. Clean up blog to show on current (last 30 days of post. Create additional page to handle older post.
- e. Clean up picture gallery.
- f. Clean up text

3. Pricing information:

- a. Free - student school Project
